

A Test Task

Make a list of results of clinical trials for human life-extension techniques (or drugs).

The list should contain:

- No greater than 10 articles, reports, or reviews, including links to relevant papers.
- Published no later than 2011.
- The summary of results, including participant parameters.

Overview of the meditech lists

https://www.researchgate.net/publication/322482979_Artificial_intelligence_in_life_extension_From_deep_learning_to_superintelligence

1. liposomal encapsulation of irinotecan (MM-398) 2015
 - One of the nanomedicine delivery successes in history, which better targets cancer cells directly with less effect on healthy cells.
 - International 417 clinical trial cases are reported
